

PROPOSAL · AUGUST 2026

Automated Advertiser Prospecting & Outreach

Prepared for Susana · August 12, 2026

Your workflow today runs across five tools that don't talk to each other — Monday.com, LinkedIn, RocketReach, Gmelius and Gmail — with a person as the integration layer between them. Every prospect costs the same manual sequence, and the qualification that decides whether a company is even worth contacting happens in someone's head.

This project makes Monday.com the only place you work. You add a company; the system does the rest and comes back to you for the one decision that needs a human — approving the email.

■ What the system does

- 01 **Qualifies** • — researches each new company and scores it against your ideal advertiser profile
- 02 **Finds the right people** — BD, Affiliate, Partnerships, UA, Performance Marketing
- 03 **Gets their email** — through your RocketReach account, verified before use
- 04 **Ranks the contacts** — by role fit, seniority and data confidence, written back to Monday
- 05 **Writes the email** — personalised to the company, the contact and the vertical
- 06 **Waits for your approval** • — then sends through your existing Gmail / Gmelius setup
- 07 **Runs the follow-ups** — and stops the moment someone replies
- 08 **Reads the replies** — interested, not interested, later, wrong contact — and updates Monday to match

• The two green steps are the ones that make this more than data entry: **nothing enters your queue unqualified, and nothing leaves without you.**

■ How it's built

Monday.com stays your only interface — there is no new tool for your team to learn. Behind it, **n8n** orchestrates every step and **Claude** handles the research, qualification, writing and reply classification. Contacts come from **RocketReach**, and email goes out through the **Gmail / Gmelius** setup you already use. Everything runs on accounts in your name and stays yours.

One honest note on LinkedIn: it offers no public API for contact discovery, and automating a personal account risks getting it restricted. We source contacts through compliant data providers instead — same result, without putting your account or your GDPR position at risk.

■ Delivery

PHASE	TIMING	LIVE AT THE END OF IT
1 · Intelligence	Weeks 1–2	Steps 01–04 — companies qualified, contacts found and ranked in Monday
2 · Outreach	Weeks 3–4	Steps 05–06 — emails drafted, approved by you, sent, Monday updated
3 · Feedback loop	Weeks 5–6	Steps 07–08 — follow-ups, reply classification, handover

*Each phase ends with acceptance criteria agreed **before** we build it, and Phase 1 runs on a real batch of your companies — so you judge the qualification quality before committing to the outreach side.*

■ Investment

Covers discovery, build, every integration above, testing on your real data, documentation and 30 days of post-launch fixes. AI and enrichment usage runs on your own accounts at cost — roughly **€60–150/month**, confirmed in Phase 1.

■ To get started, we need

- Around **20 companies you'd call ideal and 20 you'd reject** — this is how the system learns your judgement instead of guessing
- Your current **email templates** and the verticals you sell into
- Access to **Monday, RocketReach and Gmail/Gmelius**

■ Next steps

1. Approve this proposal — valid for 30 days · **2.** A 45-minute kickoff call · **3.** Phase 1 live within two weeks, qualifying real companies.

Not included (available, quoted separately): new sending domains and mailbox warm-up · migration away from Monday.com · LinkedIn messaging automation · sequences beyond English · new modules requested after Phase 1 sign-off.
