

sparo

An AI consultancy for companies

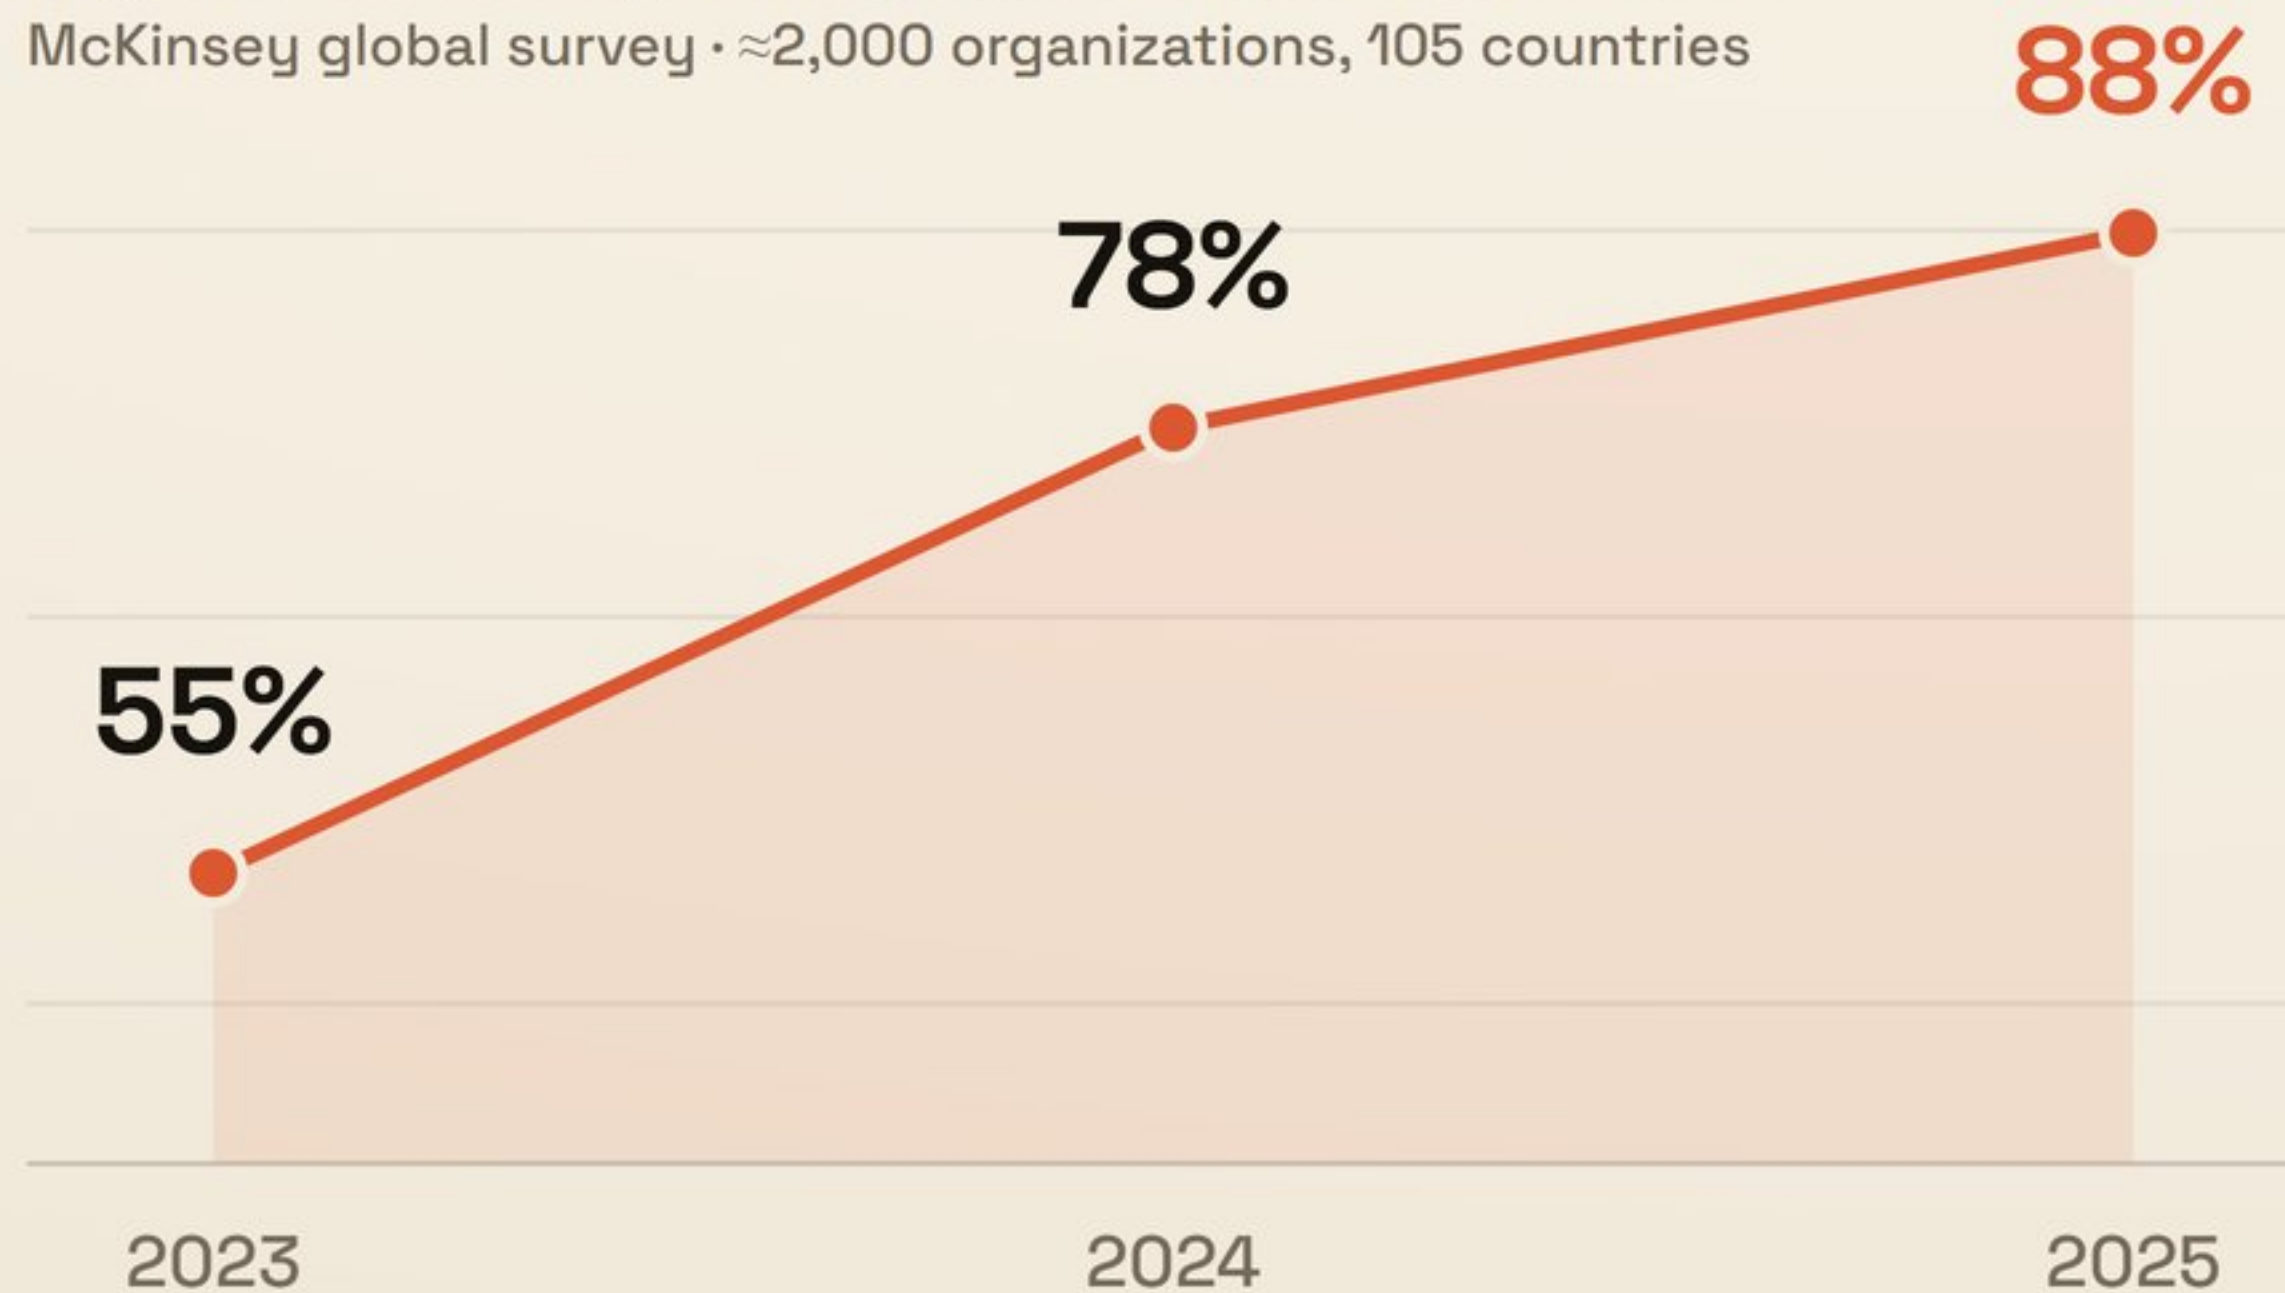

We design, build, and run AI systems that remove operational bottlenecks —
integrated into how you already work.

Every market is splitting in two:
companies that *put AI to work* — and
companies outrun by the ones that
did.

AI adoption isn't coming. **It's here.**

Organizations using AI in at least one business function

McKinsey global survey • ~2,000 organizations, 105 countries

37%

of US companies with 250+ employees run AI automations in their operations **today** — **that's your peer group.**

250+ employees

All US businesses

The bigger the operation, the more AI pays.

And most are barely scratching the surface — only **7%** have truly scaled AI. Even shallow, off-the-shelf use is already moving the numbers.

Imagine what purpose-built systems do.

And construction has the most ground to make up.

Construction labor productivity is lower today than it was in

1968

Construction firms using or increasing AI investment:

44% → 61%

in a single year

WHY IT FELL BEHIND

- Heavy regulation & paperwork
- Every project a one-off
- Tech investment: half the rate of manufacturing

What these systems actually do

Inbound, handled 24/7

Handles everyone who comes in, qualifies and routes — no human touching it.

Talk to your own data

Ask your own data a question, get the answer in seconds.

Read & validate documents

Reads a document, checks it against your rules, returns a verdict.

WHAT IT LOOKS LIKE —

LINEAR AUTOMATION

Follows a fixed track — same steps, every time

Perfect when the input is predictable

Cheap, fast, reliable — we build plenty of it

A train on rails — unbeatable where the rails go

AI AGENTS

Perceives, decides, acts

Handles the unpredictable — conversations, messy documents, exceptions

Knows when to bring in a human

A chatbot responds. An agent resolves.

Fixed path? Linear automation. Judgment needed? An AI agent.
Most operations need both — wired together.

Example: proposals and contracts, drafted for you

01

Deal terms in

The specifics of the job, straight from your team.

02

AI drafts it in your exact standard

Your format, your language, your clauses.

03

Ready to send

Reviewed by your people, not written by them.

The same logic applies to any document or process you repeat — done in minutes, in your format, every time.

Why companies put AI to work

Capacity without headcount

Handle 2–10× the volume without hiring for it.

Speed

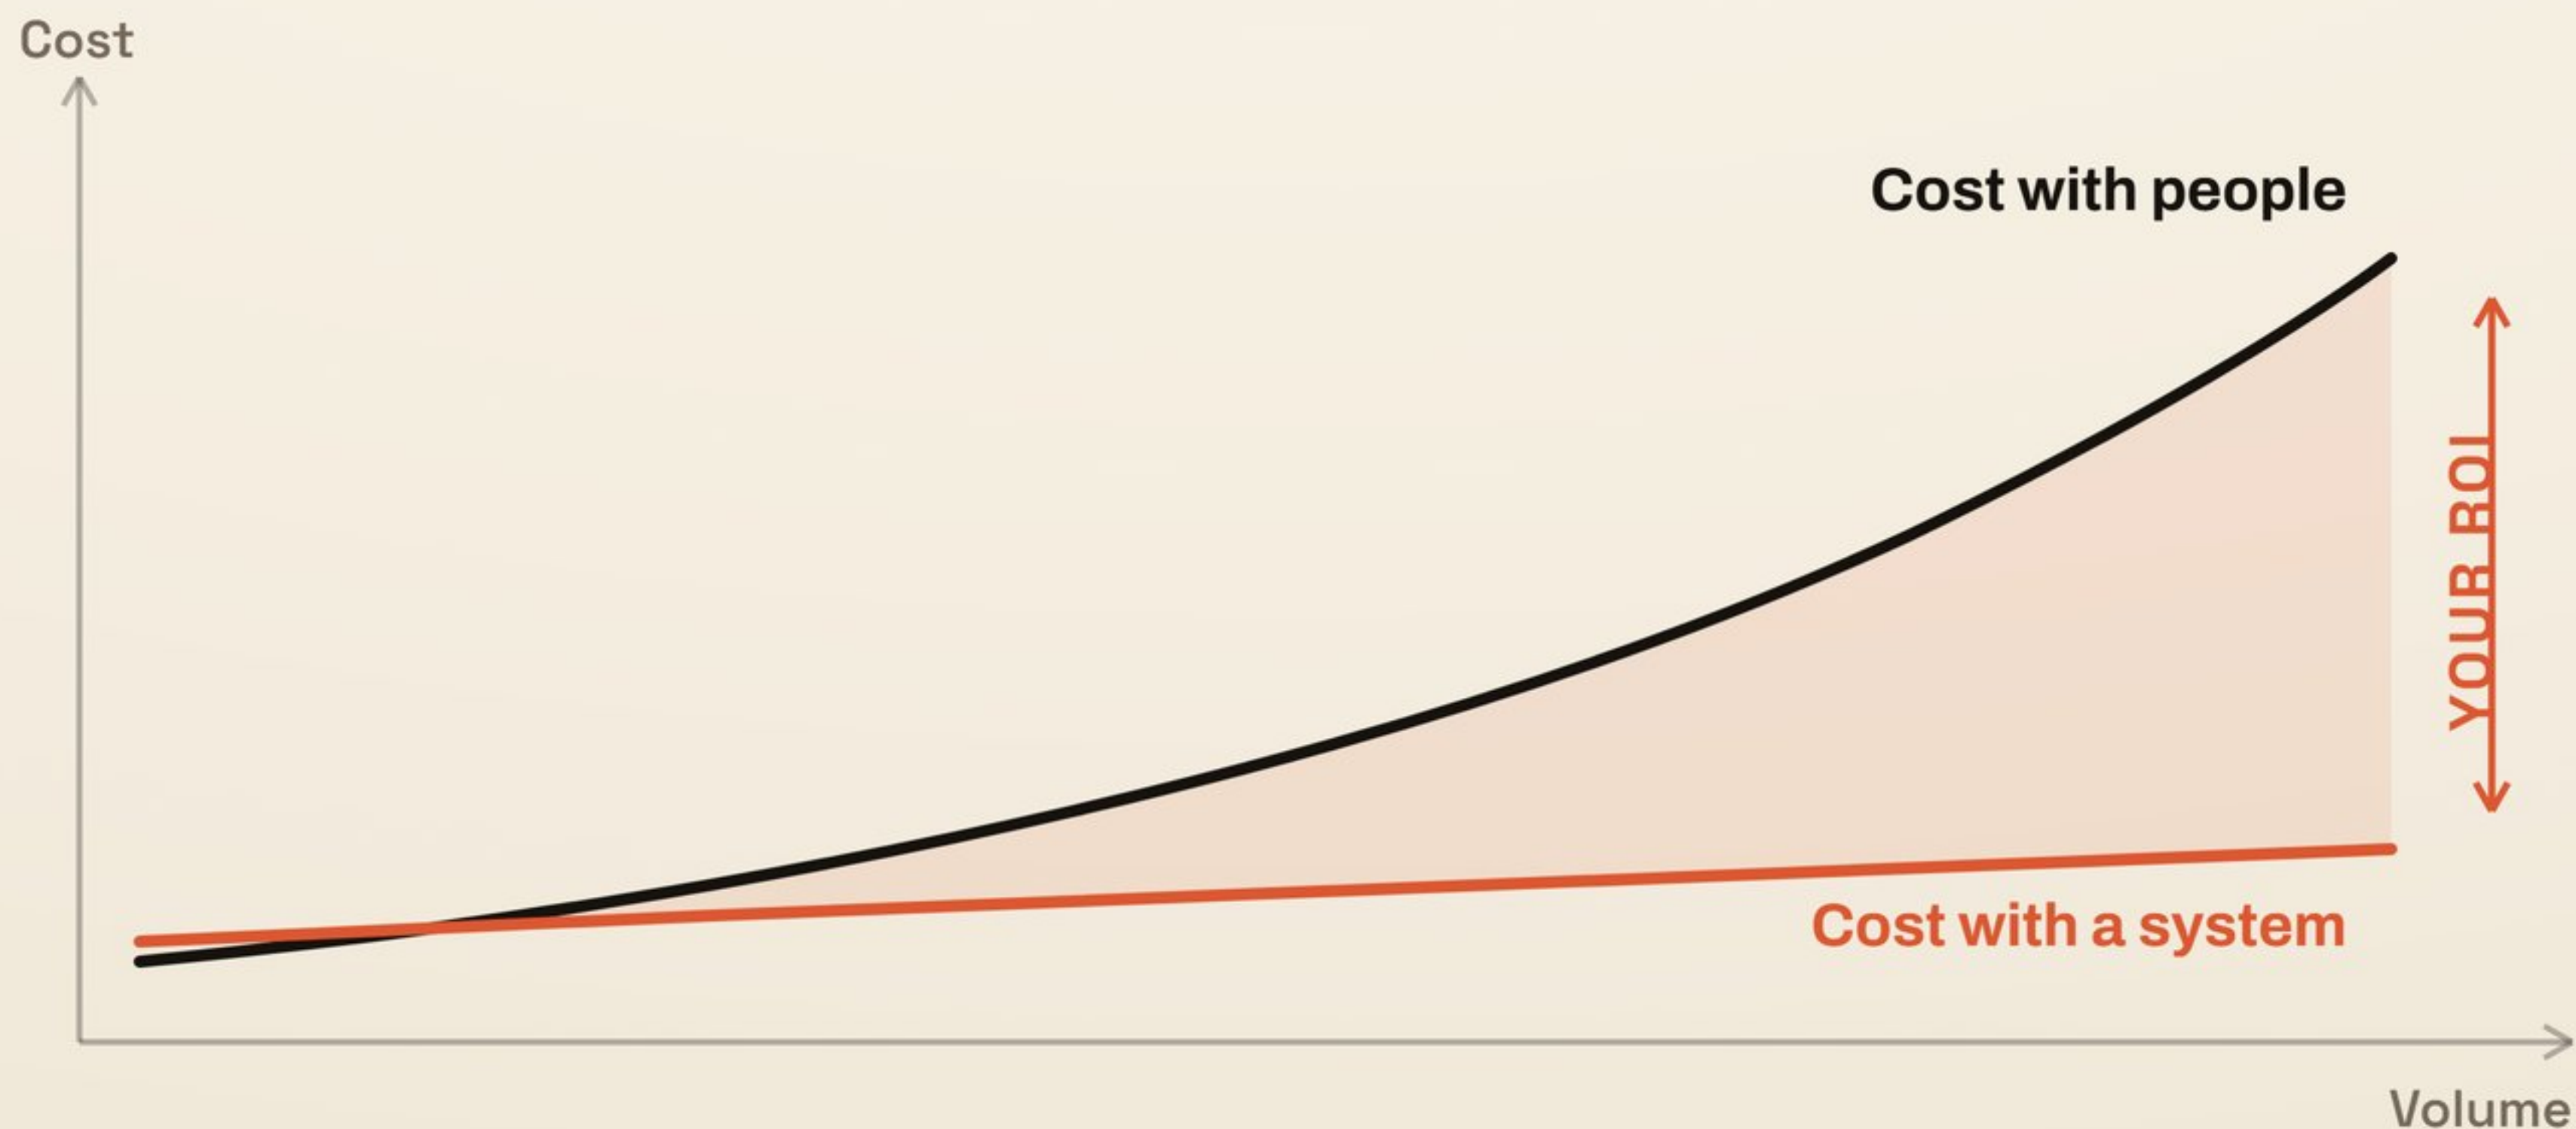

Work that took days happens in minutes.

Always on, always consistent

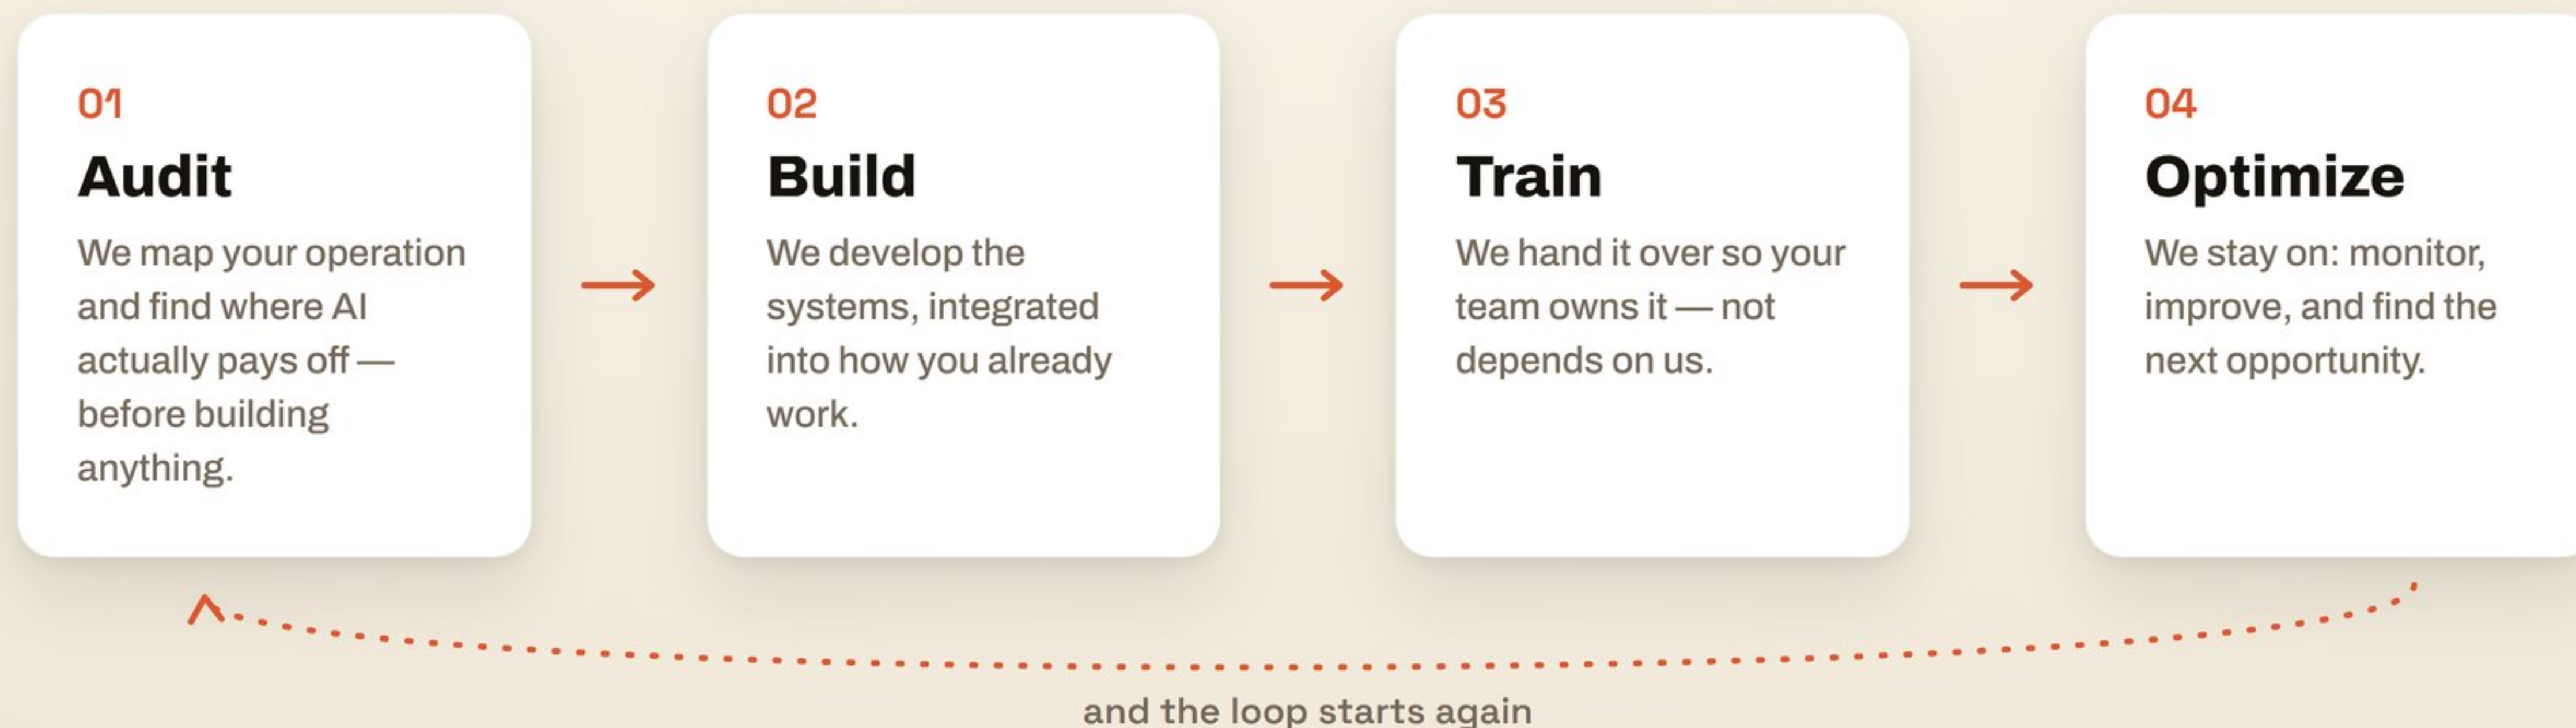

24/7, no fatigue, same quality every time.

The more you grow, the more it pays

Take on bigger volumes and keep scaling — without depending on manual human work.

From audit to always-on partner

We don't drop a tool and leave. We become your AI team.

A partner, not a vendor

Most AI shops sell you a tool and disappear. We stay.

- **When it breaks, it's on us** — not your team scrambling.
 - **It keeps getting better** — we optimize what's live as your operation changes.
 - **We bring you the next win** — proactively finding the next process worth automating.
- | **One monthly partnership** — we only win if it keeps working for you.

A construction group. 500+ employees. Same problem you have.

Every new project means hiring 100–150 people in weeks — then it drops. HR drowns in inbound one month, goes quiet the next. No human team can cover that swing 24/7. Same story on the vendor side.

What we built

HR

Candidate triage

AI on WhatsApp receives every applicant, qualifies them, validates their documents, and re-activates past candidates when a matching role opens — 24/7.

VENDORS

Vendor qualification

AI checks each supplier against financial, tax and government sources and returns a qualified verdict automatically.

~70%

of applicants handled with zero human touch

days → min

response time to every applicant

24/7

coverage no human team could staff

Three places this could land at Donnelly

	Bidding & Proposals	Vendor & Sub Qualification	Invoices & Documents
WHAT IT DOES	Analyze bid invites faster; draft proposals in your standard	Standardize how you vet vendors and subs	Speed and accuracy on invoices and paperwork
HOW IT WORKS	It reads the bid documents, checks them against what you're looking for, and writes the first draft	It checks each vendor against the sources that matter and tells you if they're cleared	It reads each invoice, matches it against your records, and flags anything off
WHAT YOU GET	More bids on time, higher win rate, less manual work	Faster vetting, lower risk, full paper trail	Less rework, fewer payment delays, tighter compliance

Just ideas — the audit tells us which ones actually pay off for you.

Help us understand how you work

You know it better than anyone

- Which processes take the most time and people to get through?
- Where does work slow down, pile up, or get stuck?
- What's the most repetitive work in the business right now?
